ELECTRICAL SPECIFICATIONS (CONT')

Output Specifications

Long Term Stability..... 0.01% after 20 minute warm-up.

Hold-Up Time..... 16msec minimum

OVP.....115% to 135% on both outputs

Short-circuit Protection.....Constant current with delayed latching method on the primary output. The 12V standby utilizes the hiccup method.

Overload Protection.....Constant current with delayed latching method on the primary output. The 12V standby utilizes the hiccup method. The constant current method allows for a 5-second delay before the power supply shuts down if the output current rating exceeds 110% to 130% of maximum rated output current. The input must be recycled manually or may be digitally reset.

FET Isolation..... Internal FET isolation provided for N+1 redundant operation.

Current Sharing.....Outputs will current share within 5% when interconnected by a single wire.

Voltage Adjustment..... A potentiometer located on the face plate allows voltage adjustment from 4.5V - 13V.

PS On.....The secondary outputs are enabled only upon mating a shorter enable pin to output common on the customer's backplane.

DC OK.....A TTL low signal provides a 4ms warning prior to DC outputs dropping out of regulation.

Fault..... A digital signal provides warning of output voltage below 90% of nominal, fan fault or over temperature.

Over Temperature ProtectionThe power supply will shut down if temperature is greater than 115°C (internal temperature). The power supply is self recovering once the internal temperature falls below 71°C.

AC Okay..... A TTL high logic signal is provided when the input voltages are within normal operating conditions.

I²C/PMBUS (Optional).....Monitors temperature, output voltage, input voltage, input current, and output current; controls Fan speed, Fan LED and connects to a serial NVRAM which is programmed with serial number. PMBUS software allows monitoring of overall operation of power supply.

AC_OK_COM..... Allows all power supplies connected in series to turn on simultaneously.

DC_OK_COM.....Monitors all power supplies connected in series. All power supplies will turn off if any in the series shut down. AC must be reset to turn on.
